GIMME

Brand Guidelines

IOS IMPLEMENTATION REFERENCE

Good.

A gimme is the putt close enough that no one makes you finish it — **“that’s good, pick it up.”** The whole brand is built on that one word: **good**. Generous, certain, and a little knowing.

Gimme is a scoring & settlement app for casual foursomes. It runs the side games, keeps score, and works out who owes whom — then hands everyone a shareable result card. It **calculates the settlement; it does not move money**. Players pay each other directly through Venmo, Zelle, PayPal, or Cash App via deep links.

ETHOS LINE

That’s good.

DESCRIPTOR

The scorecard that settles itself.

POSITIONING

Premium, but playful — a members’ club for people who play for pride and a few bucks. Confident and considered, with a wink. The members are **Regulars**.

The Palette

One primary brand color: **navy**. Cream carries text and the mark; brass is an **accent, never a fill** — reserve it for emphasis, hairlines, and the winner. Slate supports.

Navy

#16263B · rgb(22, 38, 59)

Primary base. App background, surfaces, icon tile, status bar.

Cream

#F2ECDD · rgb(242, 236, 221)

Primary light. Text on navy, the wordmark, card type.

Brass

#C2A24C · rgb(194, 162, 76)

Metallic accent. Rules, highlights, the winner, settle moments.

Slate

#2E4257 · rgb(46, 66, 87)

Secondary. Hairlines, gradients, muted UI and supporting text.

IOS — DEFINE ONCE, REFERENCE EVERYWHERE

```
// Color+Gimme.swift
extension Color {
    static let navy = Color(red: 0.086, green: 0.149, blue: 0.231) // #16263B
    static let cream = Color(red: 0.949, green: 0.925, blue: 0.867) // #F2ECDD
    static let brass = Color(red: 0.761, green: 0.635, blue: 0.298) // #C2A24C
    static let slate = Color(red: 0.180, green: 0.259, blue: 0.341) // #2E4257
}
```

Volt · #C6F24E — apparel drops only

Brand-sacred. **Never** in the app, icon, or marketing. Its scarcity is the point — it lives exclusively on limited apparel.

Two Voices

Gimme

PLAYFAIR DISPLAY — THE DISPLAY SERIF

PLAYFAIR DISPLAY

High-contrast Didone serif. The brand's voice: the wordmark, the result-card headline, major screen titles. Tracked wide (~0.14em), often uppercase. Weights 700-900 for impact.

INTER

The working face. Everything functional — labels, inputs, lists, buttons, body. Weights 400/500/600. Never set the wordmark in Inter; never set body in Playfair.

TYPE SCALE (STARTING POINT)

Display	Playfair Display ExtraBold · 34pt · tracked, often UPPERCASE — wordmark, card headline, hero titles
Title	Playfair Display Bold · 22pt — screen titles, brand moments
Headline	Inter SemiBold · 17pt — section heads, emphasis
Body	Inter Regular · 15pt — copy, lists, inputs
Caption	Inter Medium · 12pt — secondary info
Label	Inter SemiBold · 11pt · tracked caps — kickers, tags

IOS — BUNDLING & USAGE

```
// 1. Bundle the .ttf/.otf in the target 2. Info.plist → UIAppFonts (array)
Text("GIMME")
  .font(.custom("PlayfairDisplay-ExtraBold", size: 34))
  .tracking(4) // ~0.14em, often uppercase

Text("Saved. You're good.")
  .font(.custom("Inter-Regular", size: 15)) // working UI
```

Both families are SIL OFL (free to bundle & ship). Register every weight you use in **Info.plist** → **UIAppFonts**, then load with `Font.custom`. Map to Dynamic Type where possible.

The Signet

The house mark is an **oval signet**: a cream outer ring, a brass inner ring, and a Playfair “G.” It is the app icon, the header mark, the stamp at the top of every result card, and the apparel mark.

WORDMARK

GIMME

THAT'S GOOD.

MEMBERS' LOCKUP

GIMME

A SOCIAL CLUB

Clear space: keep clear space at least the height of the inner ring around any mark. **Minimum size:** seal $\geq$ 24pt; wordmark cap-height $\geq$ 14pt. The supplied seal.svg is the source of truth.

DO

- + Cream-on-navy as the default lockup.
- + Let brass do the accenting — the inner ring, a hairline.
- + Scale the supplied vector; keep the oval's proportions.

DON'T

- Recolor the G, stretch the oval, or rotate the mark.
- Add shadows, gradients, or glows to the signet.
- Place it on busy photos, or render it in volt.

The Icon

A navy tile with the seal centered — cream and brass on navy. Supplied as PNGs for the PWA; for native, export a **1024×1024 master** from `seal.svg` on a navy field and let Xcode generate the set.

STANDARD TILE

ADAPTIVE / MASKED

- Keep the seal within the central **~78% safe area**; navy bleeds to all edges.
- **No transparency, no baked-in rounded corners** — iOS applies the mask.
- Supplied: `icon-192`, `icon-512`, `icon-maskable-512`, `apple-touch-icon (180)`.
- Tint & tinted/dark icon variants: keep the seal cream; never introduce a second hue.

The Growth Surface

The shareable artifact generated after a settled round. It is the product's **primary growth surface** — the thing that leaves the app and pulls the next foursome in. Build it as a first-class native view and treat it like the hero screen.

- **Format:** portrait / story ratio (9:16, export ~1080×1920).
- **Frame:** navy card, thin brass inner frame; **seal stamped** at top.
- **Context:** course · games · date, tracked caps, brass.
- **Headline:** “{winner} takes it.” in Playfair + net in brass.
- **Sub-line:** one witty auto line — affectionate, never cruel.
- **Standings:** ranked rows; winner in brass, others cream/muted.
- **Settle-up:** who-owes-who, {from} → {to} \$X, zero-sum.
- **Footer:** brass hairline + “THAT’S GOOD.”
- **Export:** render & screenshot cleanly at portrait ratio; native share sheet.

How Gimme Talks

DEFAULT REGISTER

Warmth & clarity

Functional, newcomer, and money moments. Plain, kind, unfussy. This is most of the app.

CONSTANT UNDERTONE

Confidence

Never hedging, never anxious. Gimme knows the math is right and the card is fair.

WIN / RESULT / SHARE ONLY

Confident wit

A wink — affectionate, never cruel, never at someone's expense in a confusing or money moment.

IN-APP STRINGS

Score saved "Saved. You're good."

Pending approval "Hang tight —
{name}'s confirming
the card. You're in."

Settlement reveal "That's good. Here's
where everyone
landed."

Returning user "Welcome back.
Everything's right
where you left it."

MONEY LANGUAGE

Minimize **money, buy-in, wager, winnings, bet**.
Prefer **settle up, square, result, the card**.

INCLUSIVE BY DEFAULT

Say **your group** or **everyone**. Never **guys, boys**, or
buddies. Never jokey at confusing or money
moments.

What Gimme Is Not

The anti-positioning is part of the identity. Designing *against* these keeps the product premium and out of regulatory and category traps.

No GPS / rangefinder

Gimme is social, not a course computer. No yardages, no maps.

No tournaments / leagues

Built for the casual foursome — not brackets, ladders, or org play.

No sportsbook adjacency

No odds, lines, or book framing. This is friends squaring up, not betting.

No money custody

The app calculates the settlement; players pay each other directly. Gimme never holds funds.

No stat-tracking hero

Not a handicap engine. Scores serve the round and the card, not a profile.

Volt is sacred

#C6F24E lives on limited apparel only — never the app, icon, or marketing.

When in doubt, invest in the **result card**. It is the center of gravity.

Assets & Next Steps

DELIVERED

seal.svg — vector master
icon-192.png · icon-512.png
icon-maskable-512.png
apple-touch-icon.png (180)
Seal & Wordmark reference components
This document

FOR NATIVE IOS

Export a 1024 icon master from seal.svg on navy
Bundle Playfair Display + Inter (SIL OFL)
Define the four-color palette as a Color set
Build the result card as a first-class native view
Honor the guardrails — design against them

FONTS

Playfair Display & Inter are both free under the SIL Open Font License — fonts.google.com. Bundle and ship them with the app; no licensing cost.

That's good.
